New Haven, CT 06511  
(203) 432-7394*

Dear Officer,

Inside this package are synthetic copies of DNA suspended in water. The synthetic DNA was created using a process called polymerase chain reaction (PCR). These PCR products are being shipped to Yale University DNA Analysis Facility for DNA sequencing. This material is not infectious, non-hazardous and contains no animal products.

If you have any further questions please contact me.

Sincerely,  
Carol Mariani  
Assistant Director
